Chapter 1

Introduction to HTML5

1.1 Introduction to HTML5

- HTML: Hyper Text Markup Language
- It is a standard markup language.
- It is not programming language.
- Markup language uses standard words to define things within a document.
- Browsers don't display the html tags.
- HTML describes the structure of a web page.
- It consists of a series of elements and those elements indicate to the web browser how to display the page.
- It is easy to learn.

1.1.1 Why learn HTML?

- Create website for yourself or others (to sell them).
- Become a web designer or web developer.
- Understand the web.
- Make responsive and real-world websites.

1.1.2 HTML vs HTML5

- HTML and HTML5 are similar.
- HTML is an older version, HTML5 is the latest version.

1.1.3 CSS vs CSS3

- CSS and CSS3 same with the HTML and HTML5.
- CSS is the older version and CSS3 is the latest version.

1.2 Basic HTML document

```
1 <!DOCTYPE html>
2 <html>
3   <head>
4     <title> This is document title </title>
5   </head>
6   <body>
7     <h1> My first heading </h1>
8     <p> My first paragraph </h1>
9   </body>
10 </html>
```

- The first line is always `<!DOCTYPE html>`.
 - It must only appear once at the beginning.
- The `<head>...</head>` contains the meta information of the page. Such as the title.
- The `<body></body>` tags defines and contains all the content that will be displayed in the web page.
- The `<h1></h1>` defines a header.
- The `<p></p>` defines a paragraph.

1.2.1 HTML element syntax

- All HTML elements follow similar syntax:

```
1 <tag-name> Content goes here </tag-name>
```

- The first tag is the opening tag, the second tag is the closing tag.

1.2.2 Key points

- HTML always start with the `<!DOCTYPE html>`
- Begins with `<html>` and ends with `</html>`. Similar with body which starts with `<body>` and ends with `<body>`
- Never skip the end tag or closing tag.
- All html files must start with the .html extension.

1.3 Requirements to learn HTML5

You will need a web browser and a code editor.

Web Browser	Code Editor
Firefox	Notepad ++
Opera mini	Visual Studio code editor
Internet Explorer	Atom
Safari	Sublime text 3
Chrome Browser	Brackets code editor
